

Sr. Production Engineer
Position Description-Pittsburgh

Responsibilities:

- Identify, evaluate and propose potential development projects; new opportunities to optimize production
- Monitor existing gas production for performance and optimization potential to minimize water production and the application of artificial lift
- Interface with operations staff to correctly evaluate development opportunities including mentoring and developing less experienced engineers
- Apply nodal analyses to analyze existing and future production potential for development or new properties for exploration and/or exploitation
- Apply sound engineering principles in a very practical manner to resolve daily operations issues

Experience:

- Minimum of 10 years industry experience
- Direct hands on experience in the basics of production engineering with an ability to apply advanced techniques such as nodal analysis to resolve production issues
- Strong PC skills including knowledge of engineering packages for artificial lift and economics (OGRE a plus)
- Thorough understanding of gas production particularly shale in order to add value through enhancement and undeveloped assets
- Demonstrated ability to solve problems
- Experience in developing shale plays required

Behaviors:

- Enthusiastic about the oil and gas business – understands how to develop assets to their full potential over the course of their life cycle
- Can work as an individual contributor and a team member
- Excellent communication skills – ability to communicate and work well with peers
- Technical, quantitative, and detail orientations very strong – thorough
- Strong theoretical background yet must be able to resolve production problems by being very practical and hands on

Education:

- Bachelor's in engineering required

Compensation:

- Commensurate with experience
- Excellent benefits and incentives
- Relocation package negotiated
- Stock ownership eligibility

Company:

The company is an independent oil and gas company operating in the Southwestern, Appalachian and Gulf Coast regions of the United States. The Company pursues a growth strategy that targets exploitation of its sizeable inventory of lower risk development drilling opportunities including an increasing number of projects that target shale and coal bed methane resource projects. These development activities are combined with a complementary acquisition effort. The company's 2008 year-end drilling inventory included more than 12,000 proven drilling projects, and its leasehold position totaled 3.7 (3.0 net) million acres. Proved reserves totaled 2.7 Tcfe, a 19% increase over the prior year. The company's common stock is listed on the New York Stock Exchange.
